

# AuthPoint MFA:

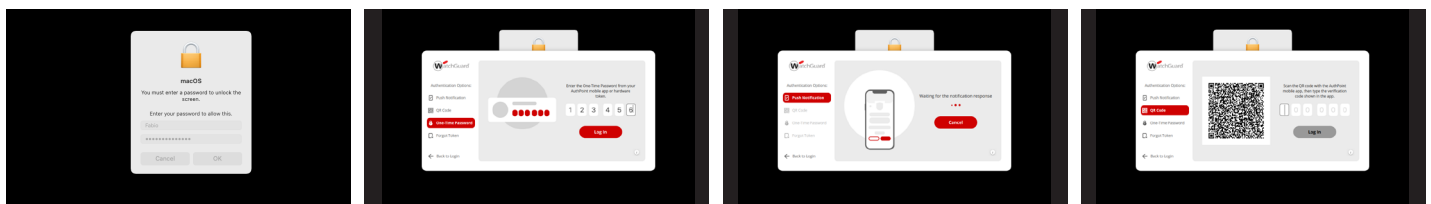

## The Perfect Match for Organizations Using Windows and Mac Devices

Did you know that AuthPoint MFA includes desktop authentication for macOS clients? AuthPoint provides comprehensive security across your work environment. Whether your employees use Windows or Mac endpoints, a secure experience is guaranteed.

- **Enhanced Security:** Protect employees and MacBook users from credentials phishing, privilege elevation risks affecting macOS, VPN / remote access, and single sign-on to applications.
- **User Experience:** Unlock a modern, easy-to-use, and frictionless endpoint user experience for workplace employees and extended workforce users such as vendors and contractors.
- **Achieve Compliance:** The latest AuthPoint agent for macOS enables privilege elevation capabilities, which can be critical in complying with industry regulations, company policies, and cyber insurance requirements.

### Choose Authpoint MFA to Protect Access to Endpoints

- **Easy to Install and Update:** AuthPoint agents are developed with simplified installation and update procedures to reduce the time and resources needed for deployment and maintenance, allowing IT teams to focus on other critical tasks.
- **Complete Logon Protection:** Provide a consistent sign-in flow across computers, regardless of the operating system (OS).
- **Simply Beautiful:** The user interface (UI) provides a modern look and better usability for desktop users.

AuthPoint sign-in flow for macOS

### AuthPoint Logon Configuration Comparison Chart

	WatchGuard	DUO	Okta	Microsoft	Sophos
