

Falcon Go

Award-winning, AI-powered cybersecurity purpose-built to protect small and medium-sized businesses (SMBs)

Stop ransomware before it stops your business

Small and medium-sized businesses are increasingly under attack, and traditional antivirus tools can't keep up. CrowdStrike Falcon® Go delivers award-winning cybersecurity to protect against ransomware and other threats that could shut down your business. With just a few simple clicks, quickly and easily download and install the protection that you need. Falcon Go makes effective cybersecurity easy for anyone to use, especially non-technical staff.

Key capabilities

- **Deploys protection immediately across across mobile devices, removable media devices, and business computers:** A guided setup wizard with pre-configured protection levels makes it easy to add devices, while immediately understanding and applying the right security levels
- **Stops threats while verifying protection:** A simple, unified home screen instantly shows if devices are protected, summarizes threat activity, and highlights resolution of cyberattacks
- **Reduces risk of data theft:** Gain full visibility and control over employees' use of USB devices and SD cards across all environments, and Bluetooth and Thunderbolt devices on macOS, to prevent accidental or intentional downloading of sensitive company information and data
- **Streamlines cybersecurity management:** Manage all protected devices, deploy endpoint agents, and authorize users from a single, comprehensive console

Key benefits

- Affordable protection purpose-built for small businesses
- Regularly tested by third-party industry analysts and independent organizations
- Simple setup — one-time easy installation of the Falcon sensor
- Simplified interface that's easy for anyone to use
- Responsive support, available 24/7

What's included?

CrowdStrike Falcon® Prevent Next-Generation Antivirus (NGAV)

- » Proactively anticipates advanced cyber threats and evolves as cybercriminals evolve
- » Protects your business from known and unknown malware, even when you're offline
- » Regularly tested by third-party groups and ranked as an industry-leading solution
- » Provides protection from modern-day threats and protects devices

CrowdStrike Falcon® Device Control

- » Provides effortless visibility and precise control over removable media devices
- » Enables safe and accountable usage of any device connected to your endpoints including flash drives, cameras, and printers

CrowdStrike Falcon® for Mobile

- » Detects malicious activity and unwanted access to your Android and iOS mobile devices
- » Provides a complete picture of all mobile activity from a single, centralized console

Proactive prevention

Unlike reactive legacy antivirus (AV) products, Falcon Prevent NGAV proactively protects against evolving cyber threats with one solution, even when offline. It uses a combination of tactics so both known and unknown threats can be anticipated and immediately prevented. As adversaries diversify their strategies, Falcon Prevent NGAV evolves with them.

Reactive antivirus vs. proactive NGAV

Reactive

- Only able to defend against known malware or ransomware previously cataloged by the legacy AV provider, making it unable to protect your devices against new threats
- Requires scans and updates that consume high percentages of resources and slow down devices
- Takes weeks to months to implement, depending on how many devices you need to protect

Proactive

- Uses modern technology — including artificial intelligence, behavioral detection, and machine learning — to protect your devices from the latest cyber threats
- Uses a cloud-based architecture that does not require additional hardware or software
- Provides effective coverage no matter how many devices you need to protect

Operating system coverage: For more information about supported operating system versions, please click [here](#).

Industry recognition

The CrowdStrike Falcon platform achieved 100% ransomware prevention from SE Labs.

About CrowdStrike

CrowdStrike (Nasdaq: CRWD), a global cybersecurity leader, has redefined modern security with the world's most advanced cloud-native platform for protecting critical areas of enterprise risk — endpoints and cloud workloads, identity and data.

Powered by the CrowdStrike Security Cloud and world-class AI, the CrowdStrike Falcon® platform leverages real-time indicators of attack, threat intelligence, evolving adversary tradecraft and enriched telemetry from across the enterprise to deliver hyper-accurate detections, automated protection and remediation, elite threat hunting and prioritized observability of vulnerabilities.

Purpose-built in the cloud with a single lightweight-agent architecture, the Falcon platform delivers rapid and scalable deployment, superior protection and performance, reduced complexity and immediate time-to-value.

CrowdStrike: We stop breaches.
